Professional Summary

Full-stack developer, founder of Keuri Digital Store, and Software Engineering student pursuing a BSc in Computing at the University of Sunderland. Founded and built a live digital products business in early 2026, and gained internship experience at Tamarind Community, a humanitarian tech initiative supporting Myanmar, working on frontend components, databases, and integration in a team. Builds end to end with TypeScript, JavaScript, Python, SQL, Node.js, React, Next.js, Supabase, and PostgreSQL. Seeking a full-stack developer role building reliable, well-structured web applications.

How I Work

1. Understand the real problem and who has it → **2. Plan & design** the screens and data model before coding → **3. Build small**, working pieces in TypeScript, testing as I go → **4. Improve** from real feedback, fixing what slows people down first.

Technical Skills — and How I Use Them

Frontend	Build interfaces mobile first, one reusable component at a time, and check them on real phones before shipping. React, Next.js, Tailwind CSS, HTML, CSS
Backend & Database	Design the data model first, then build the API around it; Node.js services and Redis when a system has more moving parts. Node.js, Supabase, PostgreSQL, Redis, REST APIs, Graph Data Modeling (Neo4j)
Languages	TypeScript by default so mistakes surface in the editor, not in front of users; JavaScript for quick tools and games; Python, Java and SQL for university and data work. TypeScript, JavaScript, Python, Java, SQL
Design & Process	Sketch the UI/UX before coding, follow the SDLC from requirements to testing, and use AI tools to move faster while reviewing every change. UI/UX Design, SDLC, Claude Code, Git, Vercel, Meta Business Suite

Experience

Founder — Keuri Digital Store

2026 – Present

- Founded and run a digital products store, launched in early 2026.
- Designed and built the e-commerce site end to end with Next.js, TypeScript, and Supabase.
- Problem:** many customers can't pay by card and prefer Burmese. **Solution:** built ordering around local bank transfers and a fully bilingual (Burmese / English) storefront.
- Improve the store by watching where customers get stuck or ask questions, and fixing that step first.

Junior AI Developer Intern — Tamarind Community

2026 · 7 months

- Tamarind is a humanitarian tech initiative supporting Myanmar with tech-powered solutions after the 2025 earthquake, helping communities recover and rebuild.
- Developed and maintained frontend components for community projects within a development team.
- Worked with databases and on integration between application components.

Projects

Two-Factor Authentication Smart Door Lock — University Project

6 months

IoT Developer · Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS, RFID

- **Problem:** a lock that only checks an RFID card can be opened by anyone who finds or copies it.
- **Solution:** added a second authentication factor, logged every access attempt, and built an admin dashboard for RFID access, live device events, and security alarms.
- **Learned:** real hardware means planning for dropped connections and edge cases, not just the happy path.

Code & Coffee Game — Workshop Game

Developer · JavaScript, HTML, CSS, Vercel

- **Problem:** a workshop game must run on one projector with whatever devices people bring — no installs, no sign-ups.
- **Solution:** plain HTML, CSS, and JavaScript on Vercel with Programming Charades, Team Debug Wars, and a shared live scoreboard.
- **Improving:** after each session, simplify the rounds that drag or confuse players.

Uri Plant Shop — University Project

2 months

Full-Stack Developer

- **Problem:** first full-stack project — connecting interface, server logic, and database without a tangle.
- **Solution:** followed the SDLC (requirements, design, build, test) and kept frontend, backend, and data layers separate.
- **Learned:** plan before coding — a habit used in every project since.

Education

University of Sunderland — BSc in Computing

2026 – 2027

Currently studying · Expected graduation 2027

Info Myanmar College — HND in Software Engineering

2024 – 2026
